

<b>Who we are</b>
Genevo PTY LTD is a clean energy technology company based in Kingscliff, NSW. Genevo designs and manufacturers high quality Lithium ion energy storage systems embedded with advanced software for commercial and residential energy storage applications.
<b>What and how are we doing it?</b>
Genevo have partnered with TAFENCI and are nearing completion of an energy storage system for commercial & industrial network charge reduction. The project is located at Kingscliff TAFE campus and will be the first of its kind in NSW. Genevo will commence works on a number of larger commercial ESS for a number of local governments in NSW and QLD in the coming months. Genovese residential ESS will also be commercially available in early 2016.
<b>Why are we doing it?</b>
Energy storage promises to revolutionise the manner in which our energy requirements are both generated and distributed. Currently the financial incentives for the application of residential solar storage are too high. However, with some of the highest network or demand charge tariffs in the world, the application of smart storage technologies such as ours make viable financial sense already.
<b>What we want from you? What can we offer you?</b>
Spread the word, networking, keeping up the good work :-)
