

<b>Who we are</b>
Northern Rivers Sustain Energy is a collective of Government, Community and Industry representatives that works to foster communities which are better equipped to deal with the changes arising from climate change.
<b>What and how are we doing it?</b>
By developing and delivering projects and research that position the region for the transition to a low carbon economy. Our current project is Northern Rivers Community Bio Hubs, which will assess the feasibility of establishing 3 separate biomass processing hubs in the region for generating bioenergy and manufacturing bio-products as well as develop and implement a process to build social licence for bio-energy in the Northern Rivers.  Sustain Energy were instrumental in developing 2 key pieces of local research, The North Coast Bioenergy Scoping Study and Future Energy Skills for the North Coast.
<b>Why are we doing it?</b>
To enable our region to reduce greenhouse gas emissions from energy systems and increase the proportion of renewable energy sources to 20% by 2020.
<b>What we want from you? What can we offer you?</b>
Participate in project and assist us to develop a process to build social licence for bio-energy in the Northern Rivers.  Visit the Sustain Northern Rivers website for news & events, resources, research and much more.
